PHOTOSHOP BASICS WORKSHOP

An introduction to the mysteries of Photoshop

Photoshop is widely used to process and edit photographic images. It is an immense program but this workshop will introduce participants to the basic skills and some common techniques utilised to enable the processing of their own images. To maximize your learning opportunities you will ideally be able to bring along your own laptop with a version of Photoshop installed.

Suited to people who are new or have just started using photoshop – or would just be interested in a refresher on the basic skills and techniques

A more advanced workshop will follow
